

- **Document.getElementById():**

returns an Element object representing the element whose id property matches the specified string

- **HTMLElement.innerText**

property of the HTMLElement interface represents the rendered text content of a node and its descendants.

- **Document Object Model(DOM)**

1. programming interface for web documents
2. connects web pages to scripts or programming languages by representing the structure of a document—such as the HTML representing a web page

- **String and numbers**

```
console.log("2" + 2) // "22"
console.log(11 + 7) // 18
console.log(6 + "5") // "65"
console.log("My points: " + 5 + 9) // "My points: 59"
console.log(2 + 2) // 4
console.log("11" + "14") // "1114"
```

- **Objects:**

```
let car = {
  model: "XUV",
  prize: 1200000
}
```
